

Project & Report AI Disclosure Statement

Name of Student: Lakshya Jain **Roll Number:** BT2024044

1. Code Generation and Modification

Tool(s) Used: Claude (Anthropic)

Specific Applications: - Data cleaning / preprocessing code (delimiter fixes, missing-value handling, derived fields) - Visualization code (Python/matplotlib scripts generating the report's figures) - Boilerplate repository setup (folder structure, README)

Prompts Used & Modification Level: AI was used to write the `preprocess.py` and `make_visualizations.py` scripts based on task-set requirements and variable choices specified by the team. Chart types, variable pairings, and analytical framing (e.g. the pre/post-1980 reporting-bias comparison) were directed by the team; the AI generated the corresponding pandas/matplotlib implementation. Code was reviewed and run to confirm outputs before inclusion in the report.

2. 3D Modeling and Assets

Tool(s) Used: Not applicable.

Specific Applications: - None (this assignment does not involve 3D modeling or generated visual assets)

Description of AI Involvement: Not applicable.

3. Report Writing and Documentation

Tool(s) Used: Claude (Anthropic).

Specific Applications: - Outlining the report structure and sections - Drafting figure captions, interpretations, and reasoning text - Drafting the Limitations and Conclusions sections

Description of AI Involvement: The report's narrative text — figure interpretations, task-set conclusions, and limitations — was drafted by AI based on the computed statistics and chart outputs, then reviewed by the team. The underlying data analysis (which numbers to cite, which comparisons to draw) was directed by the team; the AI's role was primarily drafting and structuring the written explanation of those results, not independently determining the findings.

4. Academic Integrity & Verification

Core Logic & Authorship Statement: I certify that the dataset selection, task-set design, choice of variables, and analytical framing for my task set reflect my own understanding of the assignment and the data. Furthermore, the analysis, conclusions, and technical evaluations presented in the report reflect my own understanding of the material. AI tools were used for

supplemental code generation, report drafting, and editing as described above; I have reviewed the generated code and text and take responsibility for the accuracy and interpretation of the figures and findings attributed to my task set.

Link to Chat Transcripts (If applicable): Not applicable.

Task Set: C - Impact Severity **Signature:** Lakshya Jain **Date:** September 18, 2026
